LinkedIn: <https://www.linkedin.com/in/niraj-maharjan-7a7226253/>

Github: <https://github.com/NirajMaharjan>

Education:

- Bachelor of Computer Science and Information Technology (BSc CSIT)
National College of Computer Studies, Tribhuvan University
8th Semester (Expected Graduation: 2026)
- +2 (Science Stream)
Trinity International College, Kathmandu
Completed : 2022 | GPA : 3.29
- SEE
English Preparatory School (EPS), Kathmandu
Completed : 2019 | GPA : 3.75

Relevant Courseworks: Data Structures & Algorithms, Database Management Systems, Software Engineering, Computer Networks, Object-Oriented Programming, Cloud Computing

Technical Skills:

Programming Languages: Python, JavaScript

Frameworks & Libraries: React, Django, Tailwind CSS, NextJS, Express

Databases: MySQL, PostgreSQL

Version Control: Git, GitHub

Containerization & Orchestration: Docker, Docker Compose, Kubernetes

Other Skills: REST APIs, AWS(EC2, S3, RDS, VPC, lambda)

Experience:

Frontend Developer Intern | Swornim Groups Pvt Ltd

Nov 2025 - Jan 2026

Expense Tracker - Financial management application

Technologies: Next.js 15, React, TypeScript, Tailwind CSS

- Built a secure authentication flow with JWT token management, refresh logic, route protection middleware, and global auth context.
 - Developed CRUD interfaces for income, expenses, savings, and investments, integrating all features with backend REST APIs via Axios with proper error handling.
 - Implemented expense threshold monitoring, CSV/PDF export, advanced table filtering, data visualization including Pie Charts, Bar Graphs and date-range based statement generation.
-

Academic and Personal Projects:

- **Traditional Musical Instrument Classification (ML Project)**

Implemented a convolutional neural network and mel spectrograms using NumPy, Librosa and TensorFlow to classify Nepali instruments (Bansuri, Madal, Dhimey, Sarangi, Khin) and achieved 92% accuracy. The dataset was collected manually and uploaded to kaggle)

- **Blog Website (React, Django, Postgres, Dockerized)**

Designed and implemented a RESTful API using Django REST Framework with PostgreSQL as the database. Built frontend with React to interact with the backend API for managing posts and comments. Containerized the application with Docker & Docker Compose, ensuring consistent development and deployment environments.

- **URL Shortener (Express, PostgreSQL, Redis, Docker)**

Live URL: url-shortener.maharjan-niraj.com.np

Built a full-stack URL shortener with Base62 encoding, supporting custom aliases. Designed a click analytics pipeline capturing IP, user agent, referrer, and timestamp per redirect using a PostgreSQL schema. Enforced two-tier rate limiting (100 req/15 min globally; 20 URL creations/hr per IP). Containerized the full stack using Docker & Docker Compose (app + PostgreSQL + Redis services).

Deployed the project render with 3 services (app,postgresql,redis)

Academic Strengths

- Strong foundation in computer science and backend systems
 - Eager to apply theoretical knowledge in real-world projects
 - Ability to learn and implement new technologies quickly
 - Experience with full-stack development lifecycle
-

Career Objective

Aspiring Backend/Fullstack Developer with hands-on experience building web applications using Express, Django, React, and MySQL. Skilled in API development, database design, and machine learning integration. Seeking an internship opportunity to apply my knowledge in software development and gain hands-on industry experience. I aim to contribute to meaningful projects while continuing to learn modern frameworks and best practices.
